## Introduction

This document contains a list of the resolved and known issues at the time of release and the documentation changes since EPiServer CMS 4.61. For further information about the functionality in other EPiServer CMS releases, please refer to the Release Notes for the specific release.

### **EPISERVER CMS 4.62 - ASP.NET 1.1 OR ASP.NET 2.0?**

EPiServer CMS 4.62 is built on ASP.NET 1.1, but support is available for both ASP.NET 1.1 and ASP.NET 2.0.

There are 2 template packages available for download in EPiServer CMS 4.62; one template package for ASP.NET 1.1 and another for ASP.NET 2.0. They contain the same functionality, but one package has been converted to work in the ASP.NET 2.0 environment.

### **PRODUCT SUPPORT**

Please e-mail any support issues for EPiServer CMS 4.62 to [episerver4@support.ep.se](mailto:episerver4@support.ep.se).

## New and Enhanced Functionality

The only functionality that has been enhanced in EPiServer CMS 4.62 is the addition of user interface language support for Japanese, Chinese and Portuguese.

## Installation

### **EPISERVER CMS 4.62**

EPiServer Manager 1.3.3 is required to install EPiServer 4.62. This version of EPiServer CMS Manager supports ASP.NET 2.0 .dll files. See the technical note "EPiServer CMS 4.62 Installation Instructions" for information on how to install EPiServer CMS 4.62.

### **TEMPLATES FOR ASP.NET 1.1**

The templates for ASP.NET 1.1 are delivered in the form of a .zip file as in previous EPiServer CMS versions.

### **TEMPLATES FOR ASP.NET 2.0**

#### ***Prerequisites***

Visual Studio 2005 SP1 is required to install the templates for ASP.NET 2.0.

In order for the EPiServer CMS Manager to handle projects compiled in ASP.NET 2.0, version 1.3.3 must be installed.

#### ***Installation Instructions***

1. Make sure that the site is running ASP.NET 2.0 by selecting the ASP tab in the admin interface of IIS. Alternatively use the `aspnet_regiis.exe` tool to install the ASP.NET 2.0 script maps. Execute `aspnet_regiis /?` for information on usage.

2. Download the ASP.NET 2.0 templates zip file.
3. Make a backup of all files in the Web site folder.
4. Unpack the zip file.
5. Remove the templates folder and the EPiServerSample.csproj.webinfo file.
6. Copy the unzipped files into the Web site folder.
7. Replace the existing <pages> element with the following segment in your web.config:

```
<pages validateRequest="false" enableEventValidation="false">
  <controls>
    <add tagPrefix="EpiServer" namespace="EpiServer.WebControls"
assembly="EpiServer" />
    <add tagPrefix="WebParts" namespace="EpiServer.WebParts.WebControls"
assembly="EpiServer.WebParts" />
    <add tagPrefix="WebParts"
namespace="EpiServer.WebParts.WebControls.Wsrp"
assembly="EpiServer.WebParts" />
  </controls>
</pages>
```

8. Open the Web Application Project in VS2005.
9. Compile and run the project.
10. If you are using the sample site you need to remove the old portal page ("Portal Framework" in the top menu) since it is not supported in ASP.NET 2.0.

## INSTALL EPISERVER CMS WITH THE DEVELOPMENT WEB SERVER

Follow the instructions below to install EPiServer CMS with the Development Web Server shipped with Visual Studio 2005.

1. In EPiServer CMS Manager install a site and enter a name for the site to be installed in the **Site name** box. Point it to a physical directory and append a port number of your choice in the **Site URL** field.
2. Complete the installation as usual.
3. Install the 2.0 templates as described in the previous chapter.
4. Open the project file in Visual Studio 2005 and go to the property pages for the project file.
5. Open the Web tab and type the port number that you entered earlier in the installation process in the Servers area.
6. Start a debugging session. The development Web server will start and load the setup page.
7. Install the content and you're ready to work.

## Fixed Issues in EPiServer CMS 4.62

Issue	Description
48222	Files served from Unified File System are not cachable by client browser
48223	An exception in a mirroring destination causes the whole mirroring job to terminate
48224	Mirroring channel cannot be re-ordered in the admin GUI

45503	Simple Address always adds a epslanguage parameter when rewriting url
45530	GetPostedData method on XFormData ignores "start date" and "end date" for public overloads of the method
45545	Login cookies does not work with sliding expiration
45579	Copy pages corrupts tblTree
45401	Attaching to the MovingPage event and setting CancelAction to true gives strange GUI behaviour
45635	Users and groups are not sorted by name by default when listing from database
45591	Faulty path to CSS and JS files in Admin/Workflow.aspx
45671	Calls WindowsPrincipal.IsInRole() makes 4.61 sites slow
45562	FieldOrder set to 0 when adding a new property
45436	Fetch data does not work with mirroring
45468	FileManager in ActionWindow is very slow when tblUnifiedPath contains many rows
45804	Add ability to handle negative SIDs
45815	Error message " PropertyData object with name "<some name>" already exists" in Edit mode
45816	Export should export the name of the SID for compatibility with EPiServer 5.x
45817	Publishing a page in a large site is slow due to tblWorkProperty lacking proper index
45572	Mirrored EPiFields not working (Requires the EPiServer Fields 4.61 HotFix 1 to work)
45575	Custom query strings are lost when making a post back for a page with a friendly url
45858	Added InternalPageDataHelper class
45565	Possible race condition in license handling for multiple sites with the same database
45966	Language code appears twice during postback when using FURL
45729	pages doesn't inherit categorys from the parent
45932	Wrong language code for Danish
46213	EPiServer.ConfigFileSettings.ConfigDOM can enter an invalid state
45782	Publishing certain text can cause an ORA-01460 error
46362	Saving dynamic property of type integer throws an exception
45340	The Datafactory Cache logic may cause several database request for the same page/page list
45943	Race conditions in DataFactoryCache
46819	Categories are not saved when creating a new page if they have not been modified
46820	The values for the id attribute contains invalid markup for xform input controls

<b>MS-SQL only:</b>	
45528	SQL timeout problems after upgrading to 4.61
45821	Deadlocks can occur during simultaneous page publishing
45818	Searching on properties is slow due to poorly optimized sprocs

<b>Oracle only:</b>	
45880	Value of a PropertyCategory not shown when access the published page
48215	Modifying a LOB requires that the connection be transacted
48220	Exception in Oracle SP when saving/loading category as dynamic property

## Known Issues in EPiServer CMS 4.62

Issue	Description
26726	Cannot publish pages to the root of a site (Office)
33638	Logservice – when switching to summertime the statistics will be incorrect for an hour
34365	User groups may be synchronized although the authenticated user is not of the same type as the existing user
40096	Inconsistent behaviour inside the font dialog and for the font and color dropdown menus on top of the Editor.
40182	Side effects of allowing html code in the Clickable text field
